Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1
MPHB1
melittin, major, precursor [validated] - honeybee
N;Contains: melittin F
C;Species: Apis melifera (honeybee)
C;Species: Api

A; Accession: A91640 A; Molecule type: protein A; Residues: 44 + 69 < HAB> R; Gauldie, J; Hanson, J.M.; Shipolini, R.A.; Vernon, C.A. Eur. J. Blochem. 83, 405 + 410, 1978 A; Title: The Structures of some peptides from bec venom. A; Reference number: A91253; MUID: 78126868

A;Accession: B61285
A;Aolecule type: protein
A;Molecule type: protein
A;Residues: 51-69 <GAU>
R;Ramalingam, K.; Bello, J.
Biochem. J. 284, 663-665, 1992
A;Title: Effect of permethylation on the haemolytic activity of melittin.
A;Reference number: \$23131; MUID:92321983

A. Accession: 523131
A. Scatus: preliminary
A. Status: preliminary
B. Schroeder, E.; Luebke, K.; Lehmann, M.; Beetz, I.
B. Schroeder, E.; Luebke, K.; Lehmann, M.; Beetz, I.
A. Title: Haemolytic activity and action on the surface tension of aqueous solutions of A. Reference number: A91266; MUID:72098668
A. Ariontents: annotation; synthesis
A. Note: the structure of melittin was confirmed by synthesis of a period with.full h
B. Kreil, G.; Kreil-Kiss, G.
Blochen: Blophys. Res. Commun. 27, 275-280, 1967
A. Title: The isolation of N-formylglycine from a polypeptide present in bee venom.
A. Reference number: A90165; MUID:6748282
A. Contents: annotation

A;Note: about 10% of melittin is formylated at the amino end R;Luebke, K.; Matthes, S; Kloss, G. Experientia 27, 157-767, 1971 Experientia 27, 157-767, 1971 e. A;Title: Isolation and Structure of N(alpha)-formyl melittin.

Submitted to the EMBL Data Library, April 1996
A; Description: The sequence of C. elegans cosmid F02EB.
A; Reference number: 218436
A; Accession: T15959
A; Status: preliminary: translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-425 AMIL>
A; Residues: 1-425 AMIL>
A; Residues: 1-425 AMIL>
A; Residues: 1-625 AMIL>

Identification of a new spore coat protein gene in the cellular
slime mold DictyOstellum discoideum.";
Dev. Biol. 163:49-65(1994).
-!- FUNCTION: MAY CONTRIBUTE TO THE STRUCTURE OF THE COAT AT THE
INTERFACE BETWEEN THE MIDDLE, CELLULOSIC LAYER AND THE OUTER,
ELECTRON-DENSE, PROTEINACEOUS LAYER.
-!- SUBCELLULAR LOCATION: ACCUMULATES SPECIFICALLY IN REGULATED
SECRETORY VESICLES OF PRESPORE CELLS (PRESPORE VESICLES). THE
PROTEIN LATER ACCUMULATES EXTRACELLULARLY IN THE SPORE COAT.
-!- INDUCTION: BY C-AMP.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN (POTENTIAL).
-!- SIMILARITY: BELONGS TO THE UPF0056 (MARC) FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5;

EXTRACELLULAR (POTENTIAL).
                                                                                                                                                                            -!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
-!- SIMILARITY: BELONGS TO FAMILY 3 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                        Proc. Natl. Acad. Sci. U.S.A. 92:3161-3165(1995).
-!- FUNCTION: SENSE CHANGES IN THE EXTRACELLULAR CONCENTRATION OF
CALCIUM IONS. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY A
G-PROTEIN THAT ACTIVATES A PHOSPHATIDYLINOSITOL-CALCIUM SECOND
MESSENGER SYSTEM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         PROSITE; PSO0979; G_PROTEIN_RECEP_F3_1; 1.

```
Line present asymetre is the metatrian sected by signar protection of prombinant protein cocynimates and in the construction of recombinant protein cocynimates. The recombinant protein comprises, melitian signal peptide, vaccine. The recombinant protein comprises, melitian signal peptide, vaccine. The recombinant protein comprises, melitian signal peptide, filss) tag, r-call epitope from teanus toxoid and 21 antigenic epitopes from circumsporozoite protein (CSP), sporozoite surface protein 1 (SSP-2), liver stage antigen-1 (LSA-1), merozoite surface protein 1 (MSP-1), MSP-2, apical membrane antigen-1 (AMA-1), erythrocyte binding antigen-175 (EBA-175), rhoptry associated protein-1 (RAP-1) and gamete specific antigen, Pfg27. These epitopes were obtained at different stages of the life cycle of P. falciparum. CDC/NIIMALVAC-1 vaccine has antiparasitic activity and can used for treatment and prevention of malarial infections. Anti-CDC/NIIMALVAC-1 antibodies can be used for detecting P. falciparum in biological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant protein; CDC/NIIMALVAC-1; multivalent; malaria; vaccine; r-cell epitope; tetanus toxoid; antigenic epitope; treatment; SSP-2; circumsporozoite protein; CSP; sporozoite surface protein-1; SSP-2; liver stage antigen-1; LSA-1; merozoite surface protein-1; MSP-1; MSP-2; apical membrane antigen-1; AMA-1; erythrocyte binding antigen-175; EBA-175; rhoptry associated protein-1; RAP-1; gamete specific antigen; Pfg27; antiparasitic; prevention; anti-CDC/NIIMALVAC-1 antibody;

```
The present sequence is that of recombinant protein CDC/NIMALVAC-1, which is a multivalent, multistage malarial vaccine. The recombinant compress, melittin signal peptide, (His)6 tag, T-cell epitope protein comprises, melittin signal peptide, (His)6 tag, T-cell epitope from tetanus toxoid and 21 antiquin-2 (SSP-2), liver stage contigen-1 (CSP), sporozoite surface protein-2 (SSP-2), liver stage contigen-1 (LSA-1), merozoite surface protein-1 (MSP-1), MSP-2, apical compirance antiquen-1 (MAN-1), erythrocyte binding antiqen-175 (Banigan-175), repetry associated protein-1 (RAP-1) and gamete specific antigen, Pfg27. These epitopes were obtained at different stages of the life cycle of plasmodium falciparum. CDC/NIIMALVAC-1 vaccine has antiparasitic activity and can used for treatment and prevention of malarial infections. Anti-CDC/NIIMALVAC-1 antibodies can be used for detecting contined the contined that the contined that the contined that the continuation of malarial continuation in biological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         VEGF-X; vascular endothelial growth factor; human; vulnerary; cytostatic; anticheumatic; antiarthritic; antipsoriatic; antidiabetic; treatment; angiogenesis regulator; vascularization regulator; cancer; psoriasis; rheumaticid arthritis; diabetic retinopathy; blood vessel; organ repair; tissue regeneration; tissue repair; wound; dermal ulcer; pressure sore; venous sore; diabetic ulcer; burns; skin graft growth.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has vulnerary, cytostatic, antirheumatic, antiantitic, antiporiatic and antidiabetic activity and acts as an anglogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting anglogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair, proliferation of new blood vessels, tissue regeneration. This sequence represents a human vegf-x protein which can be expressed in Baculovirus/insect cell systems and which is
                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

This invention describes a novel vascular endothelial growth factor-X
(VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has
vulnerary, cytostatic, antirheumatic, antiparthritic, antiparolatic and
antidiabetic activity and acts as an anglogenesis and vascularization
cegulator. An antisense molecule of the invention is useful for treating
creptulator. An antisense molecule of the invention is useful for treating
creptulator. An inhibiting angiogenic activity or inappropriate
cretinopathy by inhibiting angiogenic activity or inappropriate
vascularization including formation and proliferation of new blood
vessels, growth and development of tissues, tissue regeneration and organ
of tissue repair in a subject. The products of the invention are useful
for preparing medicaments for treating wounds such as dermal ulcers,
pressure sores, venous sores, diabetic ulcers and burns and to promote
skin graft growth, tissue repair, proliferation of new blood vessels,
tissue regeneration and organ repair, proliferation of new blood vessels,
tissue regeneration. This sequence represents a human vEGF-X protein which
can be expressed in E. coli systems and which is described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
New vascular endothelial growth factor protein, useful for treating or preventing diseases associated with inappropriate angiogenesis activity such as cancer, rheumatoid arthritis, psoriasis and wounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; telomerase reverse transcriptase; hTRT; TRT; diagnosis;

The present invention relates to vaccine for prevention and/or prophylaxis of infectious salmon anaemia in fish. The invention prophylaxis of infectious salmon anaemia in fish. The invention provides for nucleic acid sequence encoding viral proteins of infectious salmon anaemia virus (ISAV) as well as the isolated protein. Nucleic acids encoding viral protein is useful for the manufacture of a DNA vaccine for diagnosis, treatment and/or prophylaxis of infectious salmon anaemia in fish, and viral protein can be used for the manufacture of antibodies that are specific for ISAV. The present equence is infectious salmon anaemia virus 92.M fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       UGGT; UDP-glucose:glycoprotein glucosyltransferase; enzyme; honeybee; melittin signal peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAB72437
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     QQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a fusion protein from an example of the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynuclectide, on administration of the compound; protein or polynuclectide, on administration of the compound; proparation of recombinant telomerase by contacting a protein of the hTRT RNA or protein in a sample by binding a relevant of the hTRT RNA or protein in a sample by binding a relevant of the hTRT RNA or protein in a sample by binding a relevant of the hTRT RNA or protein in a sample by binding a relevant of the the sample and detecting the complex formed or in the case of RNA detection, amplifying the product with presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell proliferation for exerte a medicament that inhibits ageing. A protein preparation of hTRT and the polynuclectide encoding hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0;

```
interleukin-10 (IL-10) and is assumed to be a cytokine. It can be used in the regulation of cell proliferation and differentiation, haematopoiesis, immune stimulation or suppression, tissue growth and tumour inhibition. In addition, it also has uses in the treatment of inflammation and in nutrition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cytomegalovirus US2t-DL6 fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Location/Qualifiers

                                                                                                                                                                                                      The present invention relates to a method for determining the effect of a test sample on UD-glucose:glycoprotein glucosyltransferase (UGGT) activity. The method comprises exposing an acceptor substrate for UGGT to a labelled donor in the presence of the test sample and UGGT. The method is useful for determining UGGT activity. In particular, the method is useful in glucosyltransferase assay and kinetics measurement for reticulum which catalyses the addition of a glucose residue onto asparagine. Linked oligosaccharides, which are present on incorrectly folded glycoproteins. The present sequence is the honeybee melittin signal peptide. This sequence was used in the construction of an expression vector for rat UGGT (see AAF60732 and AAB72436).

The present sequence is the honey bee (Apis melifica) melittin excretion peptide. It may be used in the Aedes aegypti Densonucleosis virus (AeDNV) based vectors of the invention to aid vector propagation, isolation and subcloning. AeDNV based vectors, esp. confg. the p61, p0.5 and p7 promoters are useful for targeting heterologous proteins to the
chains, and optionally DW-alpha chains. US2 has a double inhibitory effect on the MHC class II pathway, inhibiting recognition of callular tissue by CD8-positive and CD4-positive T cells. US2 or its soluble wariants, can be used to reduce inappropriate immune responses. The US2 protein can be used to improve the persistence of a virus. Vectors encoding soluble US2 protein (residues 281-143) can be used to treat autoimmune disease, especially where it is mediated by MHC II molecules. The vector can also be used to improve gene therapy, and preferably also contains a sequence encoding a therapeutic product. The protein is exagenously supplied or expressed from a recombinant cell, and may also be used to inhibit CD4-positive mediated immune responses, transplant immune responses and gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    expression system; promoter; p61; p0.5; p7; heterologous protein; production; vector; cassette.

The invention relates to the use of a Aedes aegypti densonucleosis virus (AeDNV) as a heterologous gene expression system. A recombinant protein using the vectors of the invention can be produced by a method that comprises (1) transfecting an insect cell that stably expresses AeDNV comprises (1) transfecting an insect cell that stably expresses AeDNV structural proteins vpl and VP2 with an expression vector comprising the comprising an AeDNV promoter linked to a sequence coding for the protein and with an expression vector comprising the AeDNV nonstructural proteins NS1 and NS2 encoding genes; (2) obtaining infectious viritons from the transfected cell; (3) infecting a second insect cell with the virions; culturing the second cell under conditions such that the protein is expressed, and (4) recovering the protein from the second cell under conditions from the second cell under conditions from the second cell under conditions when the second cell and the protein is albopictus Cévês cells can be transfected with AeDNV vectors without allowed the second cell and the protein from the second cell. Aedes albebraths of forth that the protein is albopictus Cévês cells can be transfected with AeDNV vectors without allowed the conditions that the protein is albebraths of forth that the conditions are the transfected with AeDNV vectors without allowed the conditions that the conditions that the conditions are the transfected with AeDNV vectors without allowed the conditions that the conditions that the conditions that the conditions are the conditions that the conditions are the conditions that the conditions are the conditions that the conditions that the conditions are the conditions that the conditions the conditions that the conditions that the conditions that th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cytopathic effects. The present sequence represents a honey bee cytopathic effects. This signal peptide can be used in the AeDNV mellitin excretion peptide. This signal peptide can be used in the AeDNV expression vectors for secretion or nuclear localisation.

                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a secretion signal from the plasmid pMelBac which is used in a method involving the construction of a target molecule from human J chain protein fragments. This construct is used in a method to target imaging agents to epithelial surfaces at which they may remain or undergo transeptthelial transport via transcytosis. At least one imaging agent is linked to the targeting molecule comprising a polypeptide that (a) forms a closed covalent loop, (b) contains at least J preferably 4, peptide domains having beta-sheet character separated by domains lacking beta-sheet character and (c) is not full length dimeric 19A. The imaging agents are useful in the diagnosis of disease. The target molecule is also capable of specifically binding to a basolateral factor associated with an epithelial surface to cause internalisation of a biological agent linked to the target molecule.
                                                                                                 Target; imaging agent; epithelium; transepithelial transport; diagnosis;

The secretion signal and multiple cloning site are used in the assembly of a targeting molecule (TM). The TMs are used to target biological agents to epithelial surfaces at which they can be internalised. The TMs comprise a polypeptide that: (a) forms a closed covalent loop; (b) contains at least 3, preferably 4, peptide domains having beta-sheet character separated by domains lacking beta-sheet character; and (c) is not full length dimeric IgA. The TMs are useful to prevent and/or treat diseases associated with epithelial surfaces, e.g. asthma, cancer, (myco)bacterial, viral or fungal infection, inflammatory disorders, autoimmune disorders, celiac disease, colitis, pneumonia and cystic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Targeting molecule; J chain; immunoglobulin; IgM; IgA; substrate;

This polypeptide comprises the major antigen protein 2 gene (MAP2) of Ehrlichia canis. It is encoded by the MAP2 gene (see AAV07181). A claimed composition comprises a nucleic acid (see AAV07181) encoding a polypeptide (see AMS1086-99) that elicits a protective immune response against a rickettsial pathogen. The nucleic acid is used, in human or veterinary medicine, in vaccines to protect against Rickettsia, Ehrlichia, Anaplasma and Cowdria species. The nucleic acid dose not replicate in the host but remains episomal nucleic acid dose not replicate in the host but remains episoma Ehrlichia antigenic polypeptide for at least 19 mth. The Ehrlichia antigenic polypeptides can also be used diagnostically to detect antibodies associated with Ehrlichia infection (claimed).
                                                                                                                                                                                  Composition containing nucleic acid encoding rickettsial antigen useful for, e.g. stimulating protective immune response in humans or

                                                                                                                                                                                                                                                                                                                                                                                                                                     A targeting agent for improving the delivery of drugs to target cells, particularly for delivery of enzymes, binding agents.

Cells, particularly for delivery of enzymes, binding agents.

Inhibitors, nucleic acids, carbohydrates and lipids, is new.

Inhibitors, nucleic acids, carbohydrates and lipids, is new.

Comparison and contains at least three peptide domains having covalent loop and contains at least three peptide domains having beta-sheet character. The targeting molecule preferably comprises all or a portion of a native J chain sequence. J chain comprises all or a portion of a native J chain sequence. J chain comprises all or a portion of a native J chain sequence. J chain comprises all or a portion of a native J chain sequence. J chain comprises all or a portion of a native J chain sequence. J chain composition of at least one biological agent which is capable of entering and threat and probarised epithelial cell. The targeting molecule may be linked to the biological agent by a substrate for an intracellular or extracellular enzyme which is associated with or can be used in a pharmaceutical composition for treating a patient can be used in a pharmaceutical composition for treating a patient can be used in a pharmaceutical composition for treating a patient can be used in a disease associated with non-polarised epithelial cell. Breast carcinoma, colon carcinoma, ovarian carcinoma, prestute canson and endometriosis, viral infection or inflammatory carcinoma and endometriosis, viral infection or inflammatory construction of target molecules described.

Construction of target molecules described.
                                                                                                                                                                                                                                                                                           Targeting molecule useful in drug delivery for treating cancer, viral infection or inflammatory disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 26;

Patent No. 6251392
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Hiatt, Andrew C.
APPLICANT: Fitchen, John H.
TITLE OF INVENTION: NOVEL EPITHELIAL CELL TARGETING AGENT NUMBER OF SEQUENCES: 89
CORRESPONDENCE ADDRESS:
             APPLICANT: Fitchen, John H.
TITLE OF INVENTION: NOVEL EPITHELIAL TISSUE IMAGING AGENT
NUMBER OF SEQUENCES: 93
CORRESPONDENCE ADDRESS:
ADDRESSEE: SEED and BERRY LLP

The polypeptide is prepd. by genetic engineering of genes encoding the P. falciparum circumsporozoite (CS) protein [Dame et al., Science 225: 593 (1994)], and the influence virus non-structural protein [NSI), [Base et al., Nucleic Acids Research, 8: 5945 (1980)]. The DNA encoding the 1st 91 AAS of the N-terminal of NSI (1980)]. The DNA encoding the 1st 91 AAS of the N-terminal of NSI (NSI_81) is linked via a synthetic sequence to DNA encoding Region turn is fused to DNA encoding Region [1.contg. flanking regionless the 18 AA signal region, which in turn is fused to DNA encoding Region [1.contg. flanking region sess the first nine N-terminal AAS. This CS fusion is designated REIGelias). The Pro residue separating the ASP (at the C-terminal of the linker) from Rifeliate9 is an artifact of a filled in BamHI site. The peptide can be used in a vaccine for protection against
                                                                                                                                                                                                                                                                                                                                                       /label= AAS 297-412 of CS protein

the P. falciparum circumsporozoite (CS) protein | Dame et al.,

Science 225: 593 (1984), and the influenza virus non-structural

Science 225: 593 (1984), and the influenza virus non-structural

protein 1 (NSI), | Baez et al., Nucleic Acids Research, 8 : 5845

(1980)]. The DNA encoding the 1st 81 AAs of the N-terminal of NSI

(NSI,81) is linked via a synthetic sequence to DNA encoding Region

I contg. flanking regionless the 18 AA signal region. Which in

turn is fused to DNA encoding Region II-contg. flanking region.

C This CS fusion is designated REfAuth. The Pro residue separating

the Asp (at the C-terminal of the linker) from REfAuth is an arti-
fact of a filled in BamHr site; the Gly separating Region I and

C Region II-contg. CS flanking regions is an artifact of a synthetic

FORI/TATHII I linker. The peptide can be used in a vaccine for

protection against malaria.

The complete nucleotide and AA sequences are given in EP-304720,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The polypeptide is prepd. by genetic engineering of genes encoding

The polypeptide is prepd. by genetic engineering of genes encoding the P. falciparum circumsporozoite (CS) protein [Dame et al., ct he P. falciparum circumsporozoite (CS) protein [Dame et al., ct he protein in (NS1), [Bagz et al., Nucleic Acids Research, 8 : 5845 ct (1980)]. The DNA encoding the ist 81 AAs of the N-terminal of NS1 (NS1_81) is linked to a synthetic sequence encoding four repeat curies from the immunodominant region, which in turn is linked via a synthetic sequence to DNA encoding Region I contg. flanking region a synthetic sequence to DNA encoding Region II-contg. flanking region is an artifact of a filled-in BamHI crostic. Cs flanking region is an artifact of a filled-in BamHI crostic. Cs flanking region is an artifact of a filled-in BamHI crostic. Site; the Gly separating the Region is an artifact of a filled-in BamHI crostic. Cs flanking region is an artifact of a filled-in BamHI crostic. Site; the Gly separating the Region is an artifact of a filled-in BamHI crostic can be used in a yaccine for protection against malaria. See also AAR12306-R12311 and AAR13175-R13179.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              42 ------WSPCSVTCG------KPKDELDYENDIEKKICKMEKCSS 74

                                                                                                                                                                                                                                                                                                              Region
                                                                                                                                                                                                                                                                                                                                           Region
                                                                                                                                                                                                                                         Region
 AAR13177
                              The polypeptide is prepd. by genetic engineering of genes encoding the P falciparum circumsporozoite (CS) protein [Dame et al., Science 225: 593 (1984)], and the influenza virus non-structural protein 1 (NSI), [Baez et al., Nucleic Acids Research, 8: 5845 (1980)]. The DNA encoding the 1st 81 AAs of the N-terminal of NSI (NSI_al) is linked to a synthetic sequence encoding four repeat units (the variant form) from the immunodominant region, which in turn is linked via a synthetic sequence to DNA encoding Region I contg. flanking region less the 18 AA signal region. This is linked to DNA encoding Region II-contg. flanking region II-contg. Cs. the Region I-contg. CS flanking region is an artifact of a filled-in BamHI site; the Gly separating the Region I and II-contg. CS flanking region is an artifact of a filled-in BamHI site; the Gly separating the Region I in and II-contg. CS flanking region is an artifact of a synthetic Fokl/TthIII I inter. The peptide can be used in a vaccine for protection

The polypeptide is prepd. by genetic engineering of genes encoding the P. falciparum circumsporozoite (CS) protein [Dame et al., Science 225: 593 (1984)], and the influenza virus non-structural protein 1 (NS1), [Baez et al., Nucleic Acids Research, 8: 5845 (1980)]. The DNA encoding the 1st 81 AAs of the N-terminal of NS1 (NS1_81) is linked via a synthetic sequence to DNA encoding Region I contg. flanking region less the 18 AA signal region. This is linked to a synthetic sequence encoding two repeat units from the immunodominant region, which in turn is fused to DNA encoding Region II-contg. flanking region. The Pro residue separating the Asp (at the C-terminal of the linker) from the Region I-contg. C flanking region is an artifact of a filled-in Bamil site; the Gly separating the repeat units and the Region II-contg. CS flanking region is an artifact of a synthetic FOKI/TthIII I linker. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Polypeptide comprising immunogenic determinants from P falciparum - for vaccine against malaria infection in humans.
